## PR KADECO: WEATHER PROTECTION IN ITS MOST ATTRACTIVE FORM - PURE OUTDOOR ENJOYMENT FOR GUESTS AND FRIENDS

Functional weather protection in its most attractive form: The pergola awnings from KADECO formerly erwilo, extend the ambience to the outdoor area for both the private sector and the catering industry. The elegant shape and lightweight design fits perfectly into different architectures and offers protection from sun, wind and rain in a cozy atmosphere, as a free-standing or wall-mounted solution.

Enjoying leisure time outdoors is increasingly popular as the best way of switching off and relaxing. The current outdoor living trend promises a significant increase in the quality of life. It offers excellent opportunities to increase the catering space for outdoor dining as well as living space at home. A cozy retreat in the garden or protected outdoor areas of restaurants and cafés can be flexibly and individually implemented with a pergola, upon customer request. Here, a wide range of textiles with special finishes including waterproof properties, offers the best all year round protection against UV radiation and weather influences.

### THE COZY OUTDOOR LIVING ROOM

Many people like to enjoy their free time with friends and family in the fresh air, furnishing their own outdoor area with carpet and furniture, making it more comfortable. Even in inclement weather, the desire to be outdoors is growing and drawing people outside. With the pergola awnings from KADECO formerly erwilo, in appealing designs, the living space expands to include a textile outdoor living room in the garden or on the terrace. Regardless of the weather, summer time can then be extended to the whole year. Placing the pergola by the garden pond or pool can also be easily done with the free-standing model. The free-standing pergola is also ideal for structural conditions where no holes can be drilled in the house wall or insulation, or where walls do not have sufficient load-bearing capacity.

## OUTDOOR CATERING IN ALL WEATHER

In the catering industry, the trend around living and enjoying life in the fresh air, can be perfectly taken care of with a pergola. The elegantly designed pergola creates the opportunity for a protected guest area and, where the ZIP vertical awning is included, it offers flexible and separate catering areas that attract guests all year round. The additional capacity maximizes restaurant sales.

## TIMELESS DESIGN WITH MAXIMUM FUNCTIONALITY

The pergola from KADECO formerly erwilo, can shade large areas of up to 84 m<sup>2</sup>, by using continuous fabric as a double panel and up to 35 m<sup>2</sup> as a single panel. It is wind resistant up to wind force 6 on the Beaufort scale (wind resistance class 3), due to its particularly stable design. The large area shaded by the pergola offers pleasant cooling in the summer. In the cold season, the pergola offers a flexible, protected place in the fresh air. With an extension using ZIP vertical awnings, the area is also protected from the sun, wind, insects and autumn leaves on the sides and can therefore be used almost all year round. So that even cold days can be spent in wohliger warmth under the pergola, KADECO formerly erwilo, offers the option of a specially designed radiant heater, that converts energy particularly efficiently into pleasant, instant warmth. Optional LED lightening integrated into the fabric traverses provides atmospheric light in the evening in various white tones and brightness levels that can be selected. For individual adjustments to match person style, the aluminium profile can be selected from 20 different colour versions. Further colours can be provided upon request.

## INTELLIGENTLY CONTROLLED

The pergola can be conveniently controlled via an additionally available radio remote control. Through the connection to intelligent systems, control via smartphone, notebook or iPad is also possible. Individual scenarios and flexible, time-dependent or sun position-oriented sequences can also be set up in a straightforward way. Sun and wind sensors can also control the retraction and extension of the pergola, fully automatically, depending on the weather conditions. The maintenance-free motor has a particularly quiet timing belt drive and guarantees a permanently perfect fabric position as well as a low-noise level when retracting and extending the awning fabric.
